CHAPTER V
CONCLUSION AND SUGGESTION

The following chapter concludes the result of the study. A summary of the research is presented, and findings are discussed and interpreted. This chapter purposed to summarize the research and giving suggestion.

5.1 Conclusion

Hypnoteaching was a new method applied and modified by the teacher at SMPN 1 Sidoarjo. Teacher built the principles of learning process continuously. In the applying of hypnoteaching, teacher chose role play as the activity. The rules were students used colorful hats as a media. They played as a different character based on the hats color. Teacher as guide directing student to did the role play. By the time, students were enjoying the learning.

Hypnoteaching directed students to enjoy the learning process naturally. Teacher need to understand the student's characteristic. The key of applying this method were teacher should be perceptive. Teacher believed that the students were able to speak English in role play activities used hypnoteaching method.

The hypnoteaching steps consist of the some steps. First, teacher need to clarify the student's knowledge, level of language, gesture and brain waves. It was called pacing step. Second, teacher became a leader and guide for the student who handle all of the activities at the class. The second step called leading. Third, teacher gave a positive word or statement in the beginning until the ending and also gave a motivation the students. This step was use positive statement. Fourth, teacher could give compliment, gesture or real thing as a reward. The step called giving compliment. And the last, teacher was a model for the students who showed his good performance and behavior. Teacher conditioned to the greatest person and it called modeling.

There were two categorize problems found in applying hypnoteaching method. There were teacher's problem and student's problem. The researcher found three problems faced by teacher in applying hypnoteaching method on learning speaking. The first problem was not enough time to do the entire lesson plan. To handle the first problem, teacher skip the discussion section on the second meeting and continue to do the role play. The second problem was the steps of hypnoteaching were not

done by organized. This problem caused teacher to adjust the next activities. Third problem faced by teacher was the time of meeting that is double meeting on the day. To solve the problem, teacher gave a break time for several minutes.

Besides that, there were two problems faced by students; that were demotivated to learning speaking and not optimist to the speaking activity. To solve both problems teacher applied hypnoteaching method in the role play activity.

5.2 Suggestion

In this research, the writer gives suggestions to the teacher, student and further researcher.

Teacher

The suggestion for the teacher in applying hypnoteaching is teacher need to keep their performance, mind and also their soul to be fresh and healthy. Because they are should be more attractive, happy and spirit than the student's. In applying the methods, teacher needs to know the student's characteristic and easy to read the situation. The steps are able to do not by organize well, but it does by appropriate time. They must share this method to other teachers who want to improve their learning method and giving the other teacher the true meaning of hypnoteaching.

Student

The researcher suggested to the students to follow and enjoy the learning by using hypnoteaching from beginning until the ending completely. They have to be always been motivate. But it's hard for student to make the condition always ready to standby along the time at school. In the speaking activity using hypnoteaching can make the students more creative and attractive. It also enriches their vocabulary, grammar and pronunciation.

Further Researcher

For the further researcher when someday used this method, they should be know the principles of hypnoteaching method and share the knowledge. They have to believe that everyone able to rise up their ability. The results of this research can be developed based on the data needed. In this study, researcher not found the result of hypnoteaching yet. The writer expected the next study can discuss it.
