

## **CHAPTER V**

### **CONCLUSIONS**

#### **5.1 Conclusions**

Based on the analysis, there are three kinds of learning style that is visual, auditory, and kinesthetic. The researcher found that the student with the highest total score is the student with kinesthetic learning style. Each of student has different learning style that can be proven through questionnaire. Thus, the following conclusions are as follows:

The students with visual learning style prefer to retell story based on a picture as method in speaking, neat class, read alone, easier to remember by looking at something, and able to read quickly and thoroughly. Moreover, the teacher's assessment shows that the student can be easily understood and excellent in pronunciation of vocabulary, able to communicate ideas clearly and effectively, speaks fluently, able to maintain excellent eye contact and has excellent effort on every assignments. In order to deal with the problem, they often ask the teacher. Most of the students with visual learning style prefer to use picture to help them in speaking and the teacher helps the student by giving the students instruction to see the picture once again to help them in remembering what will be spoken in front of the class. Therefore, with the correct method the students may be able to improve their speaking proficiency.

The students in auditory learning style prefer to listen to the story and retell it again. They are good at telling stories, feels annoyed when the class is crowded, prefers to talk loudly, and prefers to listen to the music than read. Auditory students love to read story and retell it again in front of the class. Moreover, the student is easily understand and excellent in pronunciation of vocabulary; able to communicate ideas clearly and effectively; speaks fluently; able to maintain excellent eye contact; and has excellent effort on every assignments. In learning speaking, they often aksing

the teacher to help them in dealing the problem. Most of the students with auditory learning style prefer to listen the material to help them in speaking English and the teacher helps the students by retelling the material again and want the students to listen it again to help them in remembering what will be spoken in front of the class. Therefore, with the correct method the student may be able to improve her speaking proficiency.

The students with kinesthetic learning style prefer to retell the story based on environment that surrounds them as method in speaking. It can be seen that the student with kinesthetic learning style prefer to learn by moving their bodies, use finger as a pointer while reading, cannot sit idle for a long time, and likes to move their bodies while studying. Moreover, the student is easily understand and excellent in pronunciation of vocabulary; able to communicate ideas clearly and effectively; speaks fluidly; able to maintain excellent eye contact; and has excellent effort on every assignments. In learning speaking, they also encounter a problem when speaking English in front of the class. They often asking the teacher to help them in dealing the problem and the teacher give instruction to recall it slowly. Therefore, with the correct method the student may be able to improve her speaking proficiency.

## **5.2 Suggestions**

Based on the conclusion, the result of the study can be used for other researcher to analyze the other learning style in writing and reading. The researcher hopes that the research of the same kind will be able to explore by other researcher better.
