STATEMENT ON PUBLICATION ETHICS AND PUBLICATION MALPRACTICE

IAEME Journals are double blind peer-reviewed journal. This statement spells out ethical behaviour of all parties involved in the act of publishing an article for this journal, i.e.: the author, the editors, the peer-reviewers and the publisher. This statement is based on COPE's Best Practice Guidelines for Journal Editors.

Ethical standards for publication exist to ensure high-quality scientific publications, public trust in scientific findings, and that people receive credit for their ideas.

DUTIES OF EDITORS

Decision on the Publication of Article

The Chief Editor and the Associate Editor responsible for deciding which of the articles accepted for publication after undergoing double blind peer review should be published. The Chief Editor and the Associate Editor may be guided by the policies of the journal's Editorial Board and subjected to such legal requirements regarding libel, copyright infringement and plagiarism. However, neither the Chief Editor nor the Associate Editor have the authority to influence the reviewers who are conducting the blind review of the articles submitted for peer review.

- **Fair Play**

Manuscripts shall be evaluated solely on their intellectual merit without regard to authors' race, gender, sexual orientation, religious beliefs, ethnic origin, citizenship, or political philosophy.

- **Confidentiality**

The Chief Editor, the Associate Editor and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher

- **Disclosure and Conflicts of Interest**

Unpublished materials disclosed in a submitted manuscript must not be used by anyone who has a view of the manuscript (while handling it) in his or her own research without the express written consent of the author

DUTIES OF REVIEWERS

Contribution of Double Blind Peer Review

Double Blind Peer review assists the reviewers in making editorial decisions, while editorial communications with the author may also assist the author in improving the paper. The reviewers don't know the author's identity, as any identifying information will be stripped from the document before review. Reviewers' comments to the editors are confidential and before passing on to the author will be made anonymous. The names of the reviewers remain strictly confidential; with their identities known only the Chief Editor and the Associate Editor.

- **Promptness**

Any selected referee who feels unqualified to review the assigned manuscript or unable to provide a prompt review should notify the Chief Editor and the Associate Editor and excuse himself/herself from the review process.

- **Confidentiality**

Manuscripts received for review must be treated as confidential documents. They must not be shown to, or discussed with, others except as authorized by the Chief Editor and the Associate Editor. Privileged information or ideas obtained through double blind peer review must be kept confidential and not used for personal advantage.

- **Standards of Objectivity**

Reviews should be conducted objectively. There shall be no personal criticism of the author. Reviewers should express their views clearly with supporting arguments.

- **Acknowledgment of Sources**

Reviewers should identify relevant published work that has not been cited by the authors. Any statement that had been previously reported elsewhere should be accompanied by the relevant citation. A reviewer should also call to the Chief Editor/Associate Editor's attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which they have personal knowledge.

- **Conflict of Interest**

Reviewers should not review manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or

other relationships or connections with any of the authors, companies, or institutions connected to the papers

DUTIES OF AUTHORS

- **Reporting Standards**

Authors of reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient detail and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behaviour and are unacceptable.

- **Data Access and Retention**

Authors may be asked to provide the raw data in connection with a paper for editorial review, and should be prepared to provide public access to such, if practicable, and should in any event, be prepared to retain such data for a reasonable time after publication.

- **Originality and Plagiarism**

Authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others, this must be appropriately cited or quoted. All journals published by IAEME are committed to publishing only original material, i.e., material that has neither been published elsewhere, nor is under review elsewhere. Manuscripts that are found to have been plagiarized from a manuscript by other authors, whether published or unpublished, will incur plagiarism sanctions.

- **Multiple Publications**

An author should not in general publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behaviour and is unacceptable.

- **Duplicate Submission**

Manuscripts that are found to have been published elsewhere, or to be under review elsewhere, will incur duplicate submission/publication sanctions. If authors have used their own previously published work, or work that is currently under review, as the basis for a submitted manuscript, they are required to cite the previous work and indicate how their submitted manuscript offers novel contributions beyond those of the previous work.

- **Acknowledgment of Sources**

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the nature of the reported work.

- **Citation Manipulation**

Submitted manuscripts that are found to include citations whose primary purpose is to increase the number of citations to a given author's work, or to articles published in a particular journal, will incur citation manipulation sanctions.

- **Data Fabrication and Falsification**

Submitted manuscripts that are found to have either fabricated or falsified experimental results, including the manipulation of images, will incur data fabrication and falsification sanctions.

- **Authorship of the Paper**

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors.

- **Improper Author Contribution or Attribution**

All listed authors must have made a significant scientific contribution to the research in the manuscript and approved all its claims. It is important to list everyone who made a significant scientific contribution, including students and laboratory technicians.

- **The Corresponding Author**

The Corresponding Author is the author responsible for communicating with the journal for publication. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

- **Acknowledgment of Funding Sources**

Sources of funding for the research reported in the article should be duly acknowledged at the end of the article.

- **Disclosure and Conflicts of Interest**

All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence

the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

- **Fundamental Errors in Published Works**

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the Chief Editor/Associate Editor and cooperate with the editors to retract or correct the paper.

- **Redundant Publications**

Redundant publications involve the inappropriate division of study outcomes into several articles

SANCTIONS

In the event that there are documented violations of any of the above mentioned policies in any journal, regardless of whether or not the violations occurred in a journal published by IAEME, the following sanctions will be applied:

- Immediate rejection of the infringing manuscript.
- Immediate rejection of every other manuscript submitted to any journal published by IAEME by any of the authors of the infringing manuscript.
- Prohibition against all of the authors for any new submissions to any journal published by IAEME, either individually or in combination with other authors of the infringing manuscript, as well as in combination with any other authors. This prohibition will be imposed for a minimum of 36 months.

- Prohibition against all of the authors from serving on the Editorial Board of any journal published by IAEME

In cases where the violations of the above policies are found to be particularly egregious, the publisher reserves the right to impose additional sanctions beyond those described above.

HOW MEASURING FINANCIAL PERFORMANCE

Didin Fatihudin

Faculty of Economics and Business, University of Muhammadiyah Surabaya, Indonesia

Jusni

Faculty of Economics and Business, Hasanuddin University of Makassar, Indonesia

Mochamad Mochklas

Faculty of Economics and Business, University of Muhammadiyah Surabaya, Indonesia

ABSTRACT

Financial performance is the achievement of the company's financial performance for a certain period covering the collection and allocation of finance measured by capital adequacy, liquidity, solvency, efficiency, leverage and profitability. Financial performance, the company's ability to manage and control its own resources. Cash flow, balance sheet, profit-loss, capital change can be the basis of information for corporate managers to make decisions. It is important to understand fundamental analysis and technical analysis, it is necessary to learn finance to understand the company's financial behavior through economics, financial management and accounting.

Key words: Financial Performance, Financial Report, Financial Study.

Cite this Article: Didin Fatihudin, Jusni and Mochamad Mochklas, How Measuring Financial Performance, International Journal of Civil Engineering and Technology, 9(6), 2018, pp. 553–557.

<http://www.iaeme.com/IJCIET/issues.asp?JType=IJCIET&VType=9&IType=6>

1. INTRODUCTION

Complete planning that identifies the organization's long-term ways of using existing resources within the organization will make the organization or company more competitive (Mochklas & Teguh, 2018).

Business activities are generally divided into three; (a) manufacturing, (b) trading, (c). Manufacturers talk about the cost of production, raw materials, cost of goods sold and profit margins. Speech trade in purchases of goods/services, distribution channels, and retail. And Services talk service fees, speed, convenience, security and service benefits. All business activities must be profitable (Horne & Wachowicz, 2001).

Financial ratios must be healthy. One healthy size-not a company is to look at financial performance. How big the company is able to create profit, the ability to pay the debt, control the debts, capital turnover, etc. Therefore, the financial statements that are subject to the study. In fact the scale of the company is different, there are small, medium, and large. Starting from individual businesses, families, joint ventures, corporations to conglomerates.

If the business scale is different, then the measurement of financial performance is also different, cannot be equated. Theories with practice in the field are sometimes different. Indeed, the theory is an ideal size, but sometimes empirical readings are not the same as the theory desires. At least this empirical can approach that should be according to the will of the theory.

The study of actual financial performance is to understand the ideal criteria provided with input data from the empirical reality of the firm. This article tries to examine what is meant by Financial performance, financial report, fundamental analysis, technical analysis, and science what if want to learn finance.

2. THEORITICAL REVIEW

Financial performance is the company's financial condition over a certain period that includes the collection and use of funds measured by several indicators of capital adequacy ratio, liquidity, leverage, solvency, and profitability. Financial performance is the company's ability to manage and control its resources (IAI, 2016).

The financial statements are financial records covering cash flows, balance sheets, profit-loss and capital changes that become information for corporate managers in taking the company's financial policy. The financial statements are the financial condition of a company comprising the balance sheet of profit/loss calculation, and other financial information, such as cash flows and retained earnings (Didin, 2017).

Fundamental analysis is an analysis based on the company's financial statements, prospectus and other company's financial profile. Technical analysis is an analysis based on market statistical data recorded by a body that describes the increase and decrease in demand and supply. Learning finance is an attempt to understand about financial management, financial reporting and financial decisions (Brealey & Myers, 1991).

3. METHOD OF STUDY

The method used in this article is literature review. The scope of study is about studying finance from company's financial performance report. Healthy or not a company will be seen from the financial performance. The company is a surplus or a deficit. Financial learning is necessary to analyze financial performance and financial statements.

4. DISCUSSION

Financial Performance Financial performance is a measure of how much a company's ability to create profit, profit or revenue. How to measure the company's financial performance in creating profits, especially companies in the financial industry such as Banking. This can be viewed from the financial statements. The financial statements consist of; (a) Balance Sheet, (b) Income, (c) Cash flow, (d) Changes in capital.

These financial statements are usually prepared and reported in annual, semester or trimester periods. It depends on his needs. Sometimes financial statements can be made different versions depending on their interests. There are financial reports for

directors/commissioners. There are financial reports for tax payments. There are financial statements for the general meeting of shareholders. There are financial statements to obtain credit loans Banking. Healthy-not a company's finances can be analyzed from the four things above.

Can Financial Performance Financial performance is a measure of how much a company's ability to create profit, profit or revenue. How do I measure the company's financial performance in creating profit ?, especially companies in the financial industry such as Banking. This can be viewed from the financial statements. The financial statements consist of; (a) Balance Sheet, (b) Income, (c) Cash flow, (d) Changes in capital.

These financial statements are usually prepared and reported in annual, semester or trimester periods. It depends on his needs. Sometimes financial statements can be made different versions depending on their interests. There are financial reports for Directors/commissioners. There are financial reports for tax payments. There are financial statements for the general meeting of shareholders. There are financial statements to obtain credit loans Banking.

Healthy-not a company's finances can be analyzed from the four things above. Can be said healthy financial, if profit surplus company. This is indicated by the ratio of operational costs to operating income. Operating income is greater than the operational cost equals surplus. If the opposite happens it is deficit, loss, bankruptcy, inefficiency. Operational costs are greater than operating income.

There are several ratios to measure the company's financial performance, among others; liquidity ratio, profitability ratio, solvency ratio, efficiency ratio, leverage ratio. For example from profitability ratio there is ROI (Return on Investment), ROE (Return on Equity), ROA (Return on Assets), EBIT (Earning Before Interest and Tax) profit. Liquidity Ratio consists of; fast ratio, current ratio, cash ratio, net working capital ratio to total assets, DER (Debt to Equity Ratio). To know in detail these ratios can be learned in the subject matter of financial management in the faculty of economics.

Fundamental and Technical Analysis Fundamental analysis and technical analysis is an analysis used by investors when making a decision to buy or sell investment instruments/portfolios in the stock market (Schall & Halay, 1991). When to buy and when to sell stocks, bonds or mutual funds. What is the difference between them? Fundamental analysis is an analysis based on the company's financial statements. While technical analysis is based on the image/graph statistics. Both have advantages and disadvantages, but both are equally important when choosing an investment instrument/portfolio. But in practice most investors use technical analysis, because more practical, just see the graphics only. If the fund seems to be more meticulous, especially for investors who can not understand the financial statements.

Learning Finance; the study of finance, you can enter the faculty of economics or high school economics, which consists of three major science courses; Economics, Management and Accounting. Thanks to the progress of science, research, information technology and communication, each of these clusters of science has subsub branches of science in more detail. Especially in finance, banking and accounting.

Economics; the study of how to cultivate limited money to meet unlimited needs with limited money (Pas & Lowes, 1997). Science that learns about how to choose. Economics is learning about money, banking, capital, and wealth. Economics is about activities in production, trade and consumption. Learn about economic growth, economic development,

economic structure. The interest of economics studies is grouped into two; macroeconomics and microeconomics. Macroeconomics studies about economic growth, economic development, inflation, labor, unemployment, poverty, fiscal policy, monetary policy. While microeconomics learn about production theory, production cost, market structure.
