CHAPTER V
CONCLUSION AND SUGGESTION

This chapter provides some conclusion and suggestion that related to findings and analysis in teaching narrative text with computer-mediated communication through collaborative approach at SMA Muhammadiyah 10 Surabaya. This chapter involves of conclusion and suggestion.

A. Conclusion

To sum up, this research was originally motivated by an awareness about growth of digital technology. The arrival of digital technology era has given many alteration in how to see the world. One of the alteration that researcher meant is the use of digital technology in teaching context. More specific, digital technology that researcher meant was e-learning application that used by SMA Muhammadiyah 10 Surabaya in teaching and learning process. This research has examined the use of e-learning application in teaching narrative text through collaborative approach.

The findings have shown that there was a significant thing in the use of e-learning application to help student increase their comprehension. Although, the process of helping student to increase their comprehension indirectly – e-learning application maximizing student's time to asking about narrative text and the things that they didn't know yet to the teacher and peers. Usually, their time allocated to read and write the task dominantly – these activities didn't gave a big contribution yet to increase student's comprehension and just wasting their time to explore the material.

Affectively, this research has shown that there is a significant role by using e-learning application in construct collaborative environment. In this era, the use of digital technology more risk to make people being an individualist. Otherwise, in the use of e-learning application through collaborative approach, the risk of being an individualist are able to reduce and make 20 students in X MIA 2 Girls can collaborate into their learning groups. This is a collaborative production in affective area. In addition, the works of e-learning application succeed to help

teacher managing the things that related to administration and student of X MIA 2 Girls are able to utilize digital technology as the media to learn collaboratively.

B. Suggestions

Based on the findings and analysis of the data, researcher want to give some suggestions to the school, teacher and future researcher for the better teaching with computer-mediated communication. Those suggestions namely:

1. The school has to add networks to support teaching and learning as maximal as possible due to the main require of those activities is availability of the network. It can be a problem in those activities when the school lack of network.

2. For the teacher, they have to use the features of e-learning application maximally. Based on the findings of this research, teacher only use e-learning application as the task, quiz, and assignment. Researcher suggest them to utilize the media as the source of passage that related to the material for student to learn whenever and wherever they want.

3. This research is not perfect yet. Hopefully, the future researcher want to elaborate the use of computer-mediated communication in teaching deeper than this research.
