CHAPTER III

METHOD OF THE RESEARCH

Method of the research discusses in this chapter. Methodology that is used to the researcher is a descriptive qualitative method. Descriptive qualitative method describes and analyzes the data to research involve the problem. It is easier than quantitative method, because it does not use accounting the data. The data are just collected and then are analyzed.

3.1 The Nature of the Research

In Kaelani (adopted from Hilway, 1956) view, research is a method that is done by the people to analyze the problems and the solve it (2012: 1). He adds, in the research there are two methods, quantitative method qualitative method. According to Bogdan and Tailor, 1975: 5 (in Kaelani, 2012: 5) state that "qualitative method as a procedure of the research that results of descriptive data."

In this chapter, it discusses about method that is used by the researcher. The researcher uses descriptive qualitative method. Descriptive qualitative method is a method that is used by the researcher without calculating the data, just collecting and then analyzing. The data is not only like that, but it also must be observed and selected before it is analyzed.

3.2 The Source of the Data

The source of the data is *The Boor's* script. The researcher reads a summary of the script, collects some books which connect with it. And search data from browsing on internet. The source the data is one of tools to write a research.

3.3 The Selection of the Data

Before selecting the data, it is observed first, collected, documented, and then selected the data that needs to research. Because, data can not use directly in the research, the data must be selected to know what else that used to this research.

3.4 The Data

The data are taken from words, phrases, and sentences that express of comedy in the script of *The Boor.* Such as:

3.4.1 "Servant" is a word.

3.4.2 "You shall see, Nikolai, how I can love and forgive! My love will die only with me--when my poor heart stops beating." It is the sentences.

3.5 The Steps of the Data Analysis

The data will be analyzed, such as the problem of the research, i.e. based on comedy in Anton Chekhov's *The Boor.* There are comedies in the script of Anton Chekhov's *The Boor.* If the drama on the stage, it will make the audience laugh. And in order to have a good analysis used several steps;

3.5.1 The first step is storing the data obtained.

3.5.2 The second step is analyzing the data based on kinds of comedy

3.5.3 The third step is selecting and analyzing the data according to the elements and the theories of comedy.

3.5.4 The fourth step is determining and classifying the data based on the problem of the research.

3.5.5 And the last step is analyzing and delivering as the written about the comedy that were researched.
